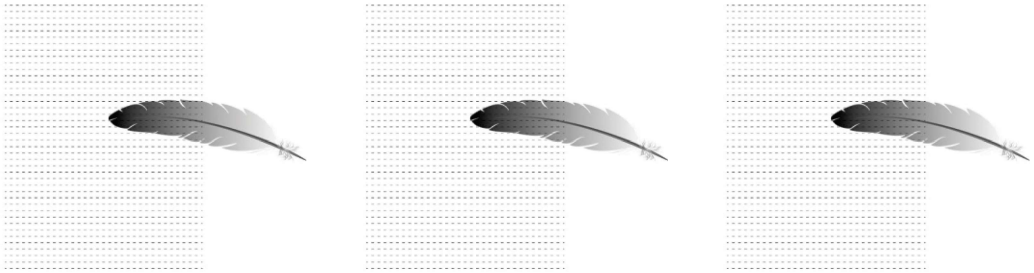
Samples: Feathers or Blood

Remove 4-6 feathers from the cloacal area. DO NOT TOUCH THE QUILL of the feathers! Attach the feather with tape without touching the quill or alternately place the feathers in a small plastic bag and staple the bag to this form.



Pour 2-3 drops of blood. Let dry before folding the form.
Please be cautious when collecting your sample: Always clean the nail clippers between each sample collection.
Do not touch the circle on the submission form or card.

Environmental Test Sample Form

Collecting for testing:

Please collect samples from the different areas where you have the birds. You need one swab per area. Run the swab thoroughly throughout the area you need to test.

Once you have collected the sample from each area, please drop each swab separately in a test tube or ziplock bag. Make sure you label each test tube or ziplock bag well with the name of the area of collection and mail to us.

Do not forget to indicate in each tube or ziplock bag the area per swab collection.

For eggshell, let it dry and send it in a sealed plastic bag or envelop, stapled to the registration form.
All samples: Please place the samples in individual zip lock bags to avoid cross contamination.
You can then mail them all together in one envelope.
